

INTERNSHIP PRESENTATION

Solutions Architecture: Designing Solutions for Real-World Impact

Forage Solutions Architecture Job Simulation

STUDENT NAME	Yatharth Rathi
ADMISSION NUMBER	2410030143
PROGRAM	B.Tech CSE — AI & ML
SEMESTER	5th Semester
UNIVERSITY	IILM University, Greater Noida

SEPTEMBER 2026

What the Simulation Was About

The Forage Solutions Architecture simulation gave me practical exposure to understanding client needs and turning them into a high-level technology solution.

The experience was focused on practical problem-solving rather than simply learning isolated technical concepts.

Forage & Solutions Architecture

Forage

A global virtual work-experience platform providing employer-designed simulations that help students develop practical skills.

Solutions Architecture

A role that connects business needs with scalable, secure and cost-effective technology solutions.

Client Scenario

A realistic-style business problem where the existing approach needs to evolve to support changing requirements.

Core idea

Solutions architecture is about selecting technology with a purpose — solving the client's problem while considering practical trade-offs.

From Client Needs to Business Impact

A well-designed solution turns a business challenge into an opportunity by connecting requirements, technology choices and measurable outcomes.

BUSINESS CHALLENGE

- Complex requirements
- Multiple stakeholders
- Technical constraints
- Need for scalable solutions

SOLUTION ARCHITECTURE

- Analyse and design
- Evaluate technology options
- Consider risk and cost
- Align with business goals

BUSINESS IMPACT

- Improved efficiency
- Reduced risk
- Better customer experience
- Long-term value

Key principle: technology decisions should always be traceable to a real business or client requirement.

Assess the Client's Needs

The first task was to understand the client before proposing a solution.

KEY ACTIVITIES

- 01 Review the client background and objectives
- 02 Identify key stakeholders and their needs
- 03 Analyse challenges, constraints and priorities
- 04 Define the core requirements for a solution

OUTCOME

A clearer understanding of what the client needed and why, forming the foundation for the design phase.

Key principle: Start with the problem, not the solution.

Designing the Right Solution

The solution had to balance business value with technical feasibility, scalability and practical constraints.

ARCHITECTURE DESIGN

Create a high-level architecture tailored to the client's requirements.

TECHNOLOGY SELECTION

Recommend suitable technologies based on scalability, security and cost.

KEY CONSIDERATIONS

Balance reliability, performance, security, cost-effectiveness and implementation.

EXPECTED OUTCOMES

Meet business objectives, solve the identified problem and support future growth.

Refine & Communicate the Solution

The final stage involved reviewing the solution, addressing potential challenges and communicating the recommendation to stakeholders.

REVIEW & REFINE

- Evaluate the solution against client requirements
- Consider potential risks and implementation issues
- Iterate when new information changes the trade-offs

COMMUNICATE INSIGHTS

- Present the solution clearly to stakeholders
- Highlight key benefits and limitations
- Tailor communication to business and technical audiences

Key principle: A great solution is only effective if it is communicated clearly.

The Solutions Architecture Workflow

A simplified view of the process I followed during the simulation.

Business objective → requirement → architecture choice → recommendation

Skills Developed & Personal Learnings

SKILLS DEVELOPED

- Analytical and problem-solving skills
- Understanding of cloud and IT solutions
- Requirement analysis and solution design
- Stakeholder communication
- Structured approach to presenting recommendations

PERSONAL LEARNINGS

- Importance of understanding the client's business context
- How to balance business needs with technical constraints
- Value of clear and concise communication
- Real-world application of classroom knowledge

This simulation strengthened my interest in solutions architecture and gave me practical insight into how technology can solve real business problems.

Certificate of Completion

Forage · Solutions Architecture Job Simulation · September 2026

Inspiring and
empowering
future professionals

Yatharth Rath Solutions Architecture Job Simulation

Certificate of Completion
September 10th, 2026

Over the period of September 2026, Yatharth Rath has completed practical tasks in:

Assess the Client's Needs and Design a Solution

A handwritten signature in black ink, appearing to read "Tom Brunskill".

Tom Brunskill
Co-Founder of Forage

Enrolment Verification Code 6aa2e4e29ad181a9cbafa243 | User Verification Code 6aa2e2a47b6283118cd770f0 | Issued by Forage

KEY TAKEAWAY

Understand the need.
Design with purpose.
Explain the decision.

Thank you for your time and consideration.

YATHARTH RATHI
